

# Floating Floors<sup>®</sup> by Tate FF 1250 24" Aluminum Chamfered Perforated Panel

TOP VIEW Standard perforated pattern - 1,024 holes 13/32" dia.

| 0000 |  |  |
|------|--|--|

#### **SPECIFICATIONS**

General information

- 24 inches square. Panel Weight: 4.50 lbs./ft² bare.
- Panel height shall be 1-5/8" without covering.
- Die cast aluminum construction.
- 23% open area.
- · Class A flame spread rating.
- Non-combustible material.
- Available with coatings.
- Optional standard perforated patterns (refer to FF1250 specification)
- Compatible with FF3000 solids, perforated panels (Refer to FF1250 specification).

#### UNDERSTRUCTURE OPTIONS

#### System Performance Criteria

System performance criteria are the most important to consider because they represent the performance in a typical installation. Panel only criteria such as concentrated load is often used to specify floor systems however, the test is not representative of an actual installation because it is performed with the panel resting on blocks, not actual understructure.

| System Performance Criteria (Tested on Actual Understructure)* |                              |                             |                    |                             |                     |                     |                     |
|--|------------------------------|-----------------------------|--------------------|-----------------------------|---------------------|---------------------|---------------------|
| System Type  |                              | SYSTEM                      | STATI              | C LOADS                     | ROLLING LOADS       |                     | IMPACT              |
